NEHRP Seismic Design

Technical Briefs

NEHRP (National Earthquake Hazards Reduction Program) Technical Briefs are published by NIST, the National Institute of Standards and Technology, as aids to the efficient transfer of NEHRP and other research into practice, thereby helping to reduce the nation's losses from earthquakes.

NIST National Institute of Standards and Technology

NIST is a federal technology agency within the U.S. Department of Commerce that promotes U.S. innovation and industrial competitiveness by advancing measurement science, standards, and technology in ways that enhance economic security and improve our quality of life. It is the lead agency of the NEHRP. Dr. John (Jack) R. Hayes, Jr., is the Director of NEHRP within NIST's Engineering Laboratory (EL). Dr. Steven L. McCabe managed the project to produce this Technical Brief for EL.

NEHRP Consultants Joint Venture

This NIST-funded publication is one of the products of the work of the NEHRP Consultants Joint Venture carried out under Contract SB134107CQ0019, Task Order 11175. The partners in the NEHRP Consultants Joint Venture are the Applied Technology Council (ATC) and the Consortium of Universities for Research in Earthquake Engineering (CUREE). The members of the Joint Venture Management Committee are James R. Harris, Robert Reitherman, Christopher Rojahn, and Andrew Whittaker, and the Program Manager is Jon A. Heintz.

About The Authors

Ron Klemencic, P.E., S.E., is President of Magnusson Klemencic Associates (MKA), a structural and civil engineering firm headquartered in Seattle, Washington. Ron is an American Concrete Institute (ACI) Fellow and serves on the ACI Board of Directors. He is a voting member of ACI 318, 318H, 318D, ITG 5, and 374. Ron is a former chairman of ACI 374 and was awarded the ACI 2010 Alfred E. Lindau Award. He recently led the development and U.S. adoption of Performance-Based Seismic Design methodology for high-rise structures.

Ian S. McFarlane, P.E., is a Senior Design Engineer at Magnusson Klemencic Associates (MKA), a structural and civil engineering firm headquartered in Seattle, Washington. He is the firm's in-house foundation design specialist, and has experience designing a number of building types including high-rise residential towers, healthcare, and office buildings.

Neil M. Hawkins, PhD, Dist. M. American Society of Civil Engineers, Hon. M. ACI, Fellow Structural Engineering Institute, Fellow Portland Cement Institute, is Professor Emeritus of Civil and Environmental Engineering, University of Illinois at Urbana-Champaign. He has served on the Main Committee and the Seismic Code Committee of ASCE 7 since 2001. He has been a member of the Main Committee and the Seismic Subcommittee of ACI 318 since 1995. He served on the Building Seismic

Safety Council (BSSC) Foundations and Concrete Subcommittees from 1987 through 2010 and on the BSSC Provisions Update Committee from 1997 through 2010.

Sissy Nikolaou, PhD, PE, is a Senior Associate at Mueser Rutledge Consulting Engineers in New York City. She leads the firm's geo-seismic services, which have been key on design or retrofit of several critical projects, such as the Hillview Reservoir Cover, Columbia University's Manhattanville Campus, and the Queensboro and Woodrow Wilson Bridges. She chairs the committee for the NYC Seismic Building Code. Sissy has received the Shamsheer Prakash award for Excellence in Geotechnical Earthquake Engineering and was recently elected as the first President of the New York-Northeast regional Earthquake Engineering Research Institute chapter.

About the Review Panel

The contributions of the three review panelists for this publication are gratefully acknowledged.

Gregg E. Brandow, PhD, P.E., S.E., is the former President of Brandow & Johnston, Structural Engineers, in Los Angeles, California, where he led the firm's design of over 4,000 projects, including schools, hospitals, and highrise buildings. He is now a Principal with Brandow & Nastar and a Professor of Engineering Practice at the University of Southern California. He has over 40 years of structural design experience, earthquake reconnaissance opportunities, and forensic engineering. He is active with SEI and ASCE and is Chair of the Structural Engineering Licensure Coalition.

Viral B. Patel, P.E., S.E., is Senior Principal and Managing Director of the Research and Development Group at Walter P. Moore and Associates Inc., a National structural/civil engineering firm headquartered in Houston, Texas. Mr. Patel is responsible for directing the Research & Development group, which develops and disseminates standardized resources, processes, and design tools to all Walter P Moore offices around the country. Mr. Patel also serves as consultant to senior project managers on all major projects throughout the firm. He is a member of ACI committees 375 and 314 and subcommittee 318-E.

James K. Wight, P.E., is the F.E. Richart, Jr. Collegiate Professor of Civil Engineering at the University of Michigan. He is a Fellow of ASCE and ACI. He is well-known nationally and internationally for his research in earthquake-resistant design of concrete structures. Professor Wight is the current President of the American Concrete Institute and has previously held several important positions including Chair of the ACI Building Code Committee. He has received numerous awards for his teaching and research including the ACI Joe Kelly Award, the C.P. Siess Award for Excellence in Structural Research, and the Wason Medal for the Most Meritorious Paper.

Standards and Technology and Director*

Contents

1. Introduction	1
2. Historical Perspectives.....	3
3. Soil Properties.....	6
4. Soil-Structure Interaction.....	8
5. Load Combinations.....	11
6. Proportioning.....	14
7. Analysis.....	16
8. Design.....	18
9. Mats Supported on Deep Foundation Elements.....	19
10. Detailing.....	20
11. Constructability Issues.....	22
12. References.....	24
13. Notation and Abbreviations.....	26
14. Credits.....	29

Disclaimers

This Technical Brief was prepared for the Engineering Laboratory of the National Institute of Standards and Technology (NIST) under the National Earthquake Hazards Reduction Program (NEHRP) Earthquake Structural and Engineering Research Contract SB134107CQ0019, Task Order 11175. The statements and conclusions contained herein are those of the authors and do not necessarily reflect the views and policies of NIST or the U.S. Government.

This report was produced by the NEHRP Consultants Joint Venture, a partnership of the Applied Technology Council (ATC) and the Consortium of Universities for Research in Earthquake Engineering (CUREE). While endeavoring to provide practical and accurate information, the NEHRP Consultants Joint Venture, the authors, and the reviewers assume no liability for, nor express or imply any warranty with regard to, the information contained herein. Users of the information contained in this report assume all liability arising from such use.

The policy of NIST is to use the International System of Units (metric units) in all of its publications. However, in North America in the construction and building materials industry, certain non-SI units are so widely used instead of SI units that it is more practical and less confusing to include measurement values for customary units only in this publication.
