Preface

In September 2014, the Applied Technology Council (ATC) commenced a task order project under National Institute of Standards and Technology (NIST) Contract SB1341-13-CQ-0009 to develop guidance for nonlinear dynamic analysis (ATC-114 Project). The need for such guidance is identified as high-priority research and development topic (Proposed Research Initiative 6) in NIST GCR 14-917-27 report, *Nonlinear Analysis Research and Development Program for Performance-Based Seismic Engineering* (NIST, 2013), which outlines a research and development program for addressing the gap between state-of-the-art academic research and state-of-practice engineering applications for nonlinear structural analysis, analytical structural modeling, and computer simulation in support of performance-based seismic engineering. In addition, the NIST GCR 09-917-2 report, *Research Required to Support Full Implementation of Performance-Based Seismic Design* (NIST, 2009), also identified the need to improve analytical models for buildings and their components in near-collapse seismic loading.

To help fill this gap, the ATC-114 Project developed a series of reports that provide general nonlinear modeling and nonlinear analysis guidance, as well as guidance specific to the following two structural systems: structural steel moment frames and reinforced concrete moment frames. This *Part I Guidelines* document is the first in the series and provides general guidance. The companion *Part II Guidelines* (NIST GCR 17-917-46v2 and 17-917-46v3) provide further details for steel moment frame and reinforced moment frame systems, respectively. It is envisioned that these *Guidelines* will be used in conjunction with available performance-assessment provisions, or their equivalent, that are appropriate for the specific circumstances.

This *Part I Guidelines* document was developed by the members of the ATC-114 Phase 2 (*Steel Moment Frames*) and ATC-114 Phase 3 (*Reinforced Concrete Moment Frames*) project teams. ATC is indebted to the leadership of Greg Deierlein and Curt Haselton, who served as Project Directors of Phase 2 and 3, respectively. The Project Technical Committee of Phase 2 and 3, consisting of Stephen Bono, Wassim Ghannoum, Mahmoud Hachem, John Hooper, Jim Malley, Silvia Mazzoni, Santiago Pujol, and Chia-Ming Uang monitored and guided the technical efforts of the Project Working Groups, which included Dustin Cook, Ian McFarlane, Gulen Ozkula, Hee Jae Yang, and Zhi Zhou. The Project Review Panel, consisting of Tony Ghodsi, Jerry Hajjar, Yuli Huang, Mike Mehraïn, Farzad Naeim, Charles Roeder, Tom Sabol, Mark Saunders, John Wallace, and Kent Yu (ATC Board Representative) provided

technical advice and consultation over the duration of the work. The names and affiliations of all who contributed to this report are provided in the list of Project Participants.

ATC also gratefully acknowledges Steven L. McCabe (Contracting Officer's Representative), Jay Harris, Siamak Sattar, Matthew Speicher, and Kevin Wong for their input and guidance throughout the project development process. ATC staff members Veronica Cedillos and Carrie Perna provided project management support and report production services, respectively.

Table of Contents

Preface	iii
List of Figures.....	ix
List of Tables	xi
1. Introduction and Scope	1-1
2. Overview of Nonlinear Modeling and Analysis Procedure.....	2-1
2.1 Overview of Seismic Performance Assessment.....	2-1
2.2 Demand Parameters	2-3
2.2.1 Response Values	2-3
2.2.2 Variability of Response	2-6
2.3 Overview of the Nonlinear Modeling Approach	2-7
2.3.1 Classification of Components by Expected Behavior.....	2-8
2.3.2 Deformation-Controlled Components	2-8
2.3.3 Force-Controlled Components.....	2-16
2.3.4 Non-Modeled Components.....	2-16
2.4 Types of Component Models.....	2-17
2.4.1 Summary of Element Model Types	2-19
2.4.2 Illustrative Moment Frame Models	2-20
2.4.3 Illustrative Concrete Shear Wall Models.....	2-22
2.4.4 Illustrative Braced Frame Models.....	2-23
2.4.5 Illustrative Wood-Frame Shear Panel Models.....	2-25
2.5 Recommended Procedures for Creating and Calibrating Component Models using Test Data.....	2-26
2.6 Flowchart Outlining Alternative Modeling Types.....	2-26
3. General Nonlinear Structural Modeling Requirements.....	3-1
3.1 General Modeling Guidelines	3-1
3.2 Seismic Mass	3-2
3.3 Gravity Loads	3-3
3.4 Geometric Nonlinearities	3-3
3.5 Material Properties.....	3-5
3.6 Floor Diaphragms and Collectors	3-6
3.6.1 Diaphragm Idealization.....	3-7
3.6.2 Diaphragm Stiffness	3-7
3.6.3 Diaphragm Behavior.....	3-9
3.6.4 Diaphragms at Irregularities	3-10
3.6.5 Diaphragm Force Output and Meshing.....	3-12
3.6.6 Chords and Collectors.....	3-12
3.6.7 Nonlinear Diaphragm Modeling	3-13
3.6.8 Diaphragm Design	3-14

3.7	Modeling of Damping	3-14
3.8	Torsion	3-18
3.9	Foundation Modeling	3-19
3.9.1	General Methods for Modeling Foundation Systems.....	3-19
3.9.2	Shallow Foundation Systems	3-20
3.9.3	Deep Foundation Systems.....	3-21
3.9.4	Sensitivity Analysis.....	3-21
3.9.5	Foundation Modeling Implementation.....	3-21
3.9.6	Foundation Acceptance Criteria.....	3-21
3.10	Soil-Structure Interaction with Input Ground Motions	3-22
3.11	Treatment of Gravity System	3-26
3.11.1	Modeling P-Delta Effects for Loads on the Gravity System.....	3-26
3.11.2	Explicitly Modeling the Gravity System.....	3-26
3.11.3	Assessing Gravity System Failure Modes.....	3-27
3.12	Effects of Non-Modeled Building Stiffnesses.....	3-27
3.13	Modeling of Residual Drifts.....	3-28
4.	Nonlinear Static (Pushover) Analysis Procedure	4-1
4.1	Overview of Procedure.....	4-2
4.2	Component Modeling Requirements.....	4-2
4.3	Equivalent Static Load	4-3
4.4	Target Displacement	4-3
4.5	Interpretation of Structural Response.....	4-3
4.6	Limitations of Nonlinear Static Analysis	4-4
5.	Nonlinear Response-History Analysis Procedure.....	5-1
5.1	Characterization of Earthquake Ground Motions	5-1
5.2	Numerical Modeling Considerations	5-4
5.2.1	Spatial Errors.....	5-4
5.2.2	Temporal Errors	5-5
5.2.3	Convergence.....	5-7
5.3	Complete the Analysis and Interpret the Structural Response Results	5-9
6.	Performance Assessment and Acceptance Criteria.....	6-1
6.1	Story Drift Demands	6-2
6.1.1	Story Drift Limits in Building Codes.....	6-2
6.1.2	Story Drift Limits in Performance-Based Design	6-3
6.2	Collapses and Other Unacceptable Responses	6-4
6.3	Element-Level Acceptance Criteria	6-5
6.3.1	Force-Controlled Actions.....	6-7
6.3.2	Deformation-Controlled Actions.....	6-9
6.4	Components of the Gravity System	6-11
6.5	Acceptance Criteria for Performance Metrics beyond Safety of the Structural System	6-11
6.6	Treatment of Modeling Assumptions through Sensitivity Analysis.....	6-12
6.7	Additional Details on Story Drift Calculations	6-12

Appendix A: Overview of Methods for Response-History Analysis.....	A-1
Appendix B: Consideration of Uncertainties.....	B-1
B.1 Overview of Uncertainties in the Performance Assessment Process	B-1
B.2 Rigorous Evaluation of Uncertainties	B-1
B.3 Typical Approach to Treatment of Uncertainties and Appropriate Interpretation of Structural Response Predictions	B-3
B.4 Consideration of Uncertainties when Establishing the Acceptance Criteria.....	B-4
B.4.1 Overview.....	B-4
B.4.2 ASCE/SEI 7-16 Chapter 16 Examples for Force-Controlled and Deformation-Controlled Components	B-5
B.4.3 Acceptance Criteria for Other Structural Responses	B-7
Appendix C: Advanced Calibration of Nonlinear Component Models	C-1
C.1 Characteristics of the Supporting Tests or Analyses	C-1
C.2 Loading Protocols for Calibration of Strength and Stiffness Deterioration	C-2
C.3 Example	C-4
References.....	D-1
Project Participants	E-1
