Preface

In 2000, the Applied Technology Council (ATC) was awarded a Data Utilization Project by the California Strong Motion Instrumentation Program (CSMIP) of the California Geological Survey, Department of Conservation, to develop *Guidelines* for using strong-motion data and computer-generated ground motion maps (ShakeMaps) in postearthquake response. The impetus for the project was the need to provide emergency response personnel with state-of-the-art tools for rapidly identifying areas likely to be severely affected by strong earthquakes and for rapidly assessing the potential for damage in buildings and other structures. A related goal was to increase the utilization of strong-motion data from ground sites and instrumented structures routinely gathered by the CSMIP and other agencies, such as the U. S. Geological Survey.

The project involved a variety of activities, including (1) an extensive review of the literature and interviews with emergency response personnel and practicing engineers to determine the state of the practice in strong-motion data utilization, including the extent to which ShakeMaps are used in emergency response; (2) the development of draft *Guidelines* for review by the advisory Project Resource Panel, and the volunteer Strong-Motion Instrumentation Advisory Committee (SMIAC) of the CSMIP; (3) the development of technical papers for presentation at the annual data utilization seminars conducted by CSMIP and at other technical seminars and conferences; (4) the conduct of a Users Workshop to enable potential users from the emergency response community and the structural engineering community to review and comment on the draft *Guidelines*; and (5) revision and finalization of the *Guidelines* based on review comments received from the Users Workshop, the Project Resource Panel, CSMIP staff, and the SMIAC.

The finalized *Guidelines*, as presented herein, address two main topics: (1) effective means for using computer-generated ground motion maps (ShakeMaps) in postearthquake emergency response; and (2) procedures for rapidly evaluating (on a near-real-time basis) strong-motion data

from ground sites and instrumented buildings, bridges, and dams to determine the potential for earthquake-induced damage in those structures. The document also provides guidance on the form, type, and extent of data to be collected from structures in the vicinity of strong-motion recordings, and pertinent supplemental information, including guidance on replacement of strong-motion instruments in/on and near buildings, bridges, and dams.

ATC is indebted to a broad range of individuals who participated in the *Guidelines* development and review process. Craig Comartin, as Project Director, organized the overall effort, and Stephanie A. King, as Co-Project Director, served as one of the principal authors, along with the Principal Investigator, Christopher Rojahn. A Working Group, composed of A. Gerald Brady, Sarah Nathe, Maurice S. Power, and Evan Reis, carried out the literature review, conducted interviews with a broad range of practicing personnel to establish the state-of-the-practice and to identify practice needs, and prepared draft portions of the *Guidelines*. The Project Resource Panel, which consisted of Thalia Anagnos, Mehmet Celebi, Lloyd S. Cluff, Charles Eadie, Sigmund A. Freeman, Terry Haney, Anne S. Kiremidjian, Ronald L. Mayes, Andrew T. Merovich, Stephen H. Pelham (ATC Board Representative), Lawrence D. Reaveley, James E. Russell, and Chris V. Tokas, provided review comments on a continuing basis, with a constant eye on practicality and clarity. Peter N. Mork and Michelle Schwartzbach provided report production services. The affiliations of these individuals are provided in the list of Project Participants.

ATC also gratefully acknowledges the input of CSMIP staff, particularly Tony Shakal and Moh Huang, the many individuals who attended the Users Workshop, and the Strong-Motion Instrumentation Advisory Committee (for a complete listing of these individuals, see committee roster in Project Participants list).

Christopher Rojahn
ATC Executive Director

Preface	iii
List of Figures	ix
List of Tables	xv
1. Introduction and Background	1
1.1 Purpose and Scope of the <i>Guidelines</i>	1
1.2 Report Development Process.....	1
1.3 Summary of Data Resources	2
1.3.1 Computer Generated Ground Motion Maps.....	2
1.3.2 Strong-Motion Data.....	4
1.4 Organization of the <i>Guidelines</i>	5
2. Guidance on Use of Computer-Generated Ground-Motion Maps in Postearthquake Response.....	7
2.1 General Principles and Guidelines.....	7
2.1.1 Essential Information.....	8
2.1.2 Basic Steps.....	8
2.1.3 Limitations.....	9
2.2 Damaged Buildings and Safety Inspections	9
2.2.1 Typical Users and Needs	9
2.2.2 Potential Data Resources	9
2.2.3 Potential Models or Data Analysis Procedures	10
2.2.4 Example.....	11
2.3 Hospitals and Other Emergency Response Facilities	13
2.3.1 Typical Users and Needs	13
2.3.2 Potential Data Resources	15
2.3.3 Potential Models or Data Analysis Procedures	15
2.3.4 Examples	16
2.4 Utility Systems and Transportation Networks.....	18
2.4.1 Typical Users and Needs	19
2.4.2 Potential Data Resources	19
2.4.2.1 Organizational Strong-Motion Instrumentation	19
2.4.2.2 Facility Inventories.....	19
2.4.2.3 Potential Ground Failure Locations	19
2.4.3 Potential Models or Data Analysis Procedures	20
2.4.4 Examples	20
2.4.4.1 Southern California Edison	20
2.4.4.2 Pacific Gas & Electric	22
2.4.4.3 Japanese Systems	22
2.5 Site Hazards	23
2.5.1 Typical Users and Needs	23
2.5.2 Potential Data Resources	23
2.5.3 Potential Models or Data Analysis Procedures	24
2.5.4 Examples	25
2.6 Casualties.....	26
2.6.1 Typical Users and Needs	26
2.6.2 Potential Data Resources	27
2.6.3 Potential Data Analysis Procedures.....	28
2.6.4 Examples	28

2.7	Estimating Debris from Collapsed Structures	29
2.7.1	Typical Users and Needs.....	29
2.7.2	Potential Data Resources.....	30
2.7.3	Potential Data Analysis Procedures	30
2.7.4	Examples	30
2.8	Estimating Shelter Needs from Housing Loss Projections	31
2.8.1	Typical Users and Needs.....	31
2.8.2	Potential Data Resources.....	31
2.8.3	Potential Data Analysis Procedures	32
2.8.4	Examples	32
2.9	Estimating Hazardous Materials Release	32
2.9.1	Typical Users and Needs.....	32
2.9.2	Potential Data Resources.....	33
2.9.3	Potential Data Analysis Procedures	33
2.9.4	Examples	33
2.10	Preliminary Economic Loss	33
2.10.1	Typical Users and Needs.....	33
2.10.2	Potential Data Resources.....	34
2.10.3	Potential Data Analysis Procedures	34
2.10.4	Examples	34
2.11	Management of Insurance Claims.....	36
2.11.1	Typical Users and Needs.....	36
2.11.2	Potential Data Resources.....	36
2.11.3	Potential Data Analysis Procedures	37
2.11.4	Examples	38
3.	Guidance on Use of Strong-Motion Data for Damage Evaluation of Structures.....	39
3.1	Strong-Motion Data Collection and Evaluation: An Overview	39
3.1.1	Prior Use of Strong-Motion Data for Structural Evaluation	40
3.1.2	Limitations of Strong-Motion Data from Instrumented Structures.....	42
3.1.3	Existing Strong-Motion Networks	43
3.1.4	Data Sources and Processing	44
3.2	Evaluation of Strong-Motion Data in or Near Buildings	44
3.2.1	Current Building Instrumentation Schemes	45
3.2.2	Examples of Prior Studies of Strong-Motion Records.....	46
3.2.3	Historical Information on Seismic Design Lateral-Force Requirements	50
3.2.4	Procedures for Evaluation of Strong Ground Motion Data.....	52
	Procedure 1: Comparison of ShakeMap-Derived Response Spectra with Seismic Design Coefficient.....	53
	Procedure 2: Comparison of Recorded-Motion Acceleration Response Spectra with Seismic Design Coefficient.....	56
	Procedure 3: Estimation of Building Drift Ratio Using Recorded Ground-Motion Displacement Response Spectra.....	58
3.2.5	Procedures for Evaluation of Strong Motion Data from Instrumented Buildings Using Visual Techniques	60
	Procedure 4: Hand Modal Analysis of Structural Response Records	60
	Procedure 5: Evaluation of High-Frequency Bursts of Acceleration	68
3.2.6	Procedures for Evaluation of Strong-Motion Data from Instrumented Buildings Using Digital Data Analysis Technique	71
	Procedure 6: Evaluation of Period Lengthening by Moving-Window Fast Fourier Transform Analysis	72
	Procedure 7: Evaluation of Displacement Time Histories of Structural Response Records	76
	Procedure 8: Construction of Pushover Curves Using Computed Roof Level Displacements and Pseudo Acceleration Response	81

Procedure 9: Analytical Studies to Refine or Verify a Computer Model of the Building	83
3.2.7 Other Procedures for Building Damage Prediction Using Strong Ground Motion Data.....	85
3.3 Evaluation of Strong-Motion Data Recorded on or Near Bridges.....	85
3.3.1 Examples of Prior Studies of Bridge Strong-Motion Data	86
3.3.2 Assessment of Bridges Using Near-Real Time Strong-Motion Data	86
3.3.3 Existing Bridge Strong-Motion Instrumentation Networks.....	87
3.3.4 Procedures for Evaluation of Bridge Strong-Motion Data	88
3.4 Evaluation of Strong-Motion Data Recorded on or Near Dams.....	90
3.4.1 Examples of Prior Studies of Strong-Motion Data from Dams.....	91
3.4.2 Strong-Motion Instrumentation Networks for Dams.....	91
3.4.3 Assessment of Dams Using Near-Real-Time Strong-Motion Data.....	91
3.4.4 Procedures for Evaluation of Dam Strong-Motion Data	92
4. Guidance on Collection of Data for Correlating Strong Ground Motion and Structural Performance	95
4.1 Introduction	95
4.2 Important Postearthquake Survey Issues	95
4.3 Systematic Documentation of Data from Instrumented Buildings and Data in the Vicinity of Ground Motion Recording Sites.....	96
4.3.1 Data Collection	96
4.3.1.1 Selection of Recording Sites for Non-instrumented Buildings	96
4.3.1.2 Development of Survey Forms.....	96
4.3.1.3 Procedure for Filling out the Survey Forms	97
4.3.2 Data Archiving and Dissemination.....	97
4.4 Systematic Documentation of Data from Instrumented Bridges and Dams and Data in the Vicinity of Ground Motion Recording Sites	98
4.4.1 Bridges.....	98
4.4.2 Dams.....	98
Appendix A: Process for Developing Guidelines	99
Appendix B: Summary of Loss-Estimation Methodologies	103
B.1 Introduction and Scope	103
B.2 Previous Summaries of Earthquake Loss-Estimation Methods.....	103
B.3 ATC-13	104
B.4 HAZUS	105
B.5 EPEDAT	106
B.6 ATC-25	106
Appendix C: Guidance on Strong-Motion Instrumentation of Buildings	109
C.1 Building Response to Ground Motion	109
C.2 Recommended Strong-Motion Instrumentation	112
C.3 Guidelines for Placement of Instruments	112
C.4 Example Strong-Motion Instrumentation Schemes for Typical Building Configurations	115
