Preface

Since 1991, the Structural Engineers Association of Washington (SEAW) has published several editions of the *Wind Commentary to the Uniform Building Code*. The documents have been made available by SEAW to help design, construction, and enforcement professionals better understand the contents of current wind codes and thereby provide a means to reduce losses resulting from wind damage. Prior editions have addressed a wide variety of wind topics as well as example problem solutions.

This third (2004) edition of the *Wind Commentary* has been updated to incorporate new knowledge on wind design and to provide commentary to the wind provisions of the newly published *International Building Code*, as well ASCE 7, *Minimum Design Loads for Buildings and Other Structures*, which is published by the American Society of Civil Engineers (ASCE). The newly published 2000 and 2003 editions of the *International Building Code* have evolved from the decision, in the late 1990s, to combine the three model code organizations in the United States — the Building Officials and Code Administrators, International, which published the *National Building Code*; the International Conference of Building Officials, which published the *Uniform Building Code*; and the Southern Building Code Congress, which published the *Southern Building Code* — into one organization, the International Code Council (ICC). With the creation of the ICC, a corollary national goal was to establish one primary reference standard for the design of buildings. This goal was met in the late 1990s with the consensus decision amongst leading design professionals to adopt ASCE 7 as the key reference standard.

In addition to providing commentary for the IBC and ASCE 7, this third (2004) edition of the *Wind Commentary* also discusses wind provisions in the *International Residential Code* (IRC), which applies to conventional housing and is published by the International Code Council.

Similar to the prior editions, this *Wind Commentary* provides extensive information and commentary on wind topics addressed by the IBC, the IRC, and ASCE 7, and problem solutions using the IBC and ASCE 7 wind pressures.

This document is organized into two volumes. Volume 1 contains the main body of the Commentary, which includes a technical and historic overview of wind codes and discussions on a broad range of topics:

- basic wind speed;
- importance factors;
- exposure and topographic effects;
- gust response;
- design for wind pressures on main wind-force-resisting systems;
- wind pressures on components and cladding of structures;
- glass and glazing;
- prescriptive provisions;
- miscellaneous and non-building structures;
- unusual wind loading configurations;
- high winds, hurricanes, and tornadoes;
- serviceability;
- wind tunnel tests applied to design practice; and
- wind design of equipment and non-building systems.

Volume 2 consists of appendices containing 13 example problems with solutions.

SEAW and the Applied Technology Council (ATC), who now serves as the publisher for the *Wind Commentary*, gratefully acknowledge the SEAW members who developed this report and the ATC-engaged Project Engineering Panel (PEP), who provided overview and guidance. The SEAW participants consisted of John Tate (SEAW President) and the following members of the SEAW State Wind Engineering Committee: Donald R. Scott (Chairman of the SEAW Wind Engineering Committee), Jerry J. Barbera (Chairman, SEAW Commentary and Handbook Committees), Ahmad, Asili, Scott Beard, Edwin T. Huston, Edgar Lebert, John V. Loscheider, William H. Mooseker, and Tony Tschanz. The ATC appointed PEP consisted of James Delahay (Chairman), Ronald A. Cook, Larry Griffis, Jon A. Pe-

terka, and Donald R. Scott. A. Gerald Brady edited the report, and Peter N. Mork, Michelle Schwartzbach, and Angela Seybold provided report production services. The affiliations of these individuals are provided in the list of project participants.

Christopher Rojahn, ATC Executive Director
Donald R. Scott, SEAW Wind Engineering Committee Chairman

Contents

Volume 1

| | |
|--|------|
| Preface..... | iii |
| List of Figures | xi |
| List of Tables | xvii |
| 1. Technical and Historical Overview of Wind Codes..... | 1 |
| 1.1 Introduction | 1 |
| 1.2 Overview of ASCE 7, IBC, and IRC Wind Loading Methodologies | 1 |
| 1.2.1 The ASCE Standard No. 7 – 1998 and 2002 Editions | 1 |
| 1.2.2 The 2000 and 2003 IBC | 2 |
| 1.2.3 The 2000 and 2003 IRC | 3 |
| 1.3 Origin of the International Building Code | 3 |
| 1.4 History of Wind Provisions in Earlier Model Codes | 4 |
| 1.4.1 Uniform Building Code | 4 |
| 1.4.2 The Standard Building Code..... | 10 |
| 1.4.3 The BOCA National Code | 13 |
| 1.5 Wind Provisions in ANSI A58.1 and ASCE 7 Standards | 15 |
| 1.5.1 Early History of the Loading Standard | 15 |
| 1.5.2 ASCE Paper: “Wind Forces on Structures” | 16 |
| 1.5.3 ANSI A58.1-1972 | 17 |
| 1.5.4 ANSI A58.1-1982 | 18 |
| 1.5.5 MBMA Metal Building System Manual Design Procedure | 19 |
| 1.5.6 1988 ASCE Standard No. 7 | 19 |
| 1.5.7 1993, 1995 and 1998 ASCE 7..... | 20 |
| 2. Quality Assurance | 23 |
| 2.1 Relevant 2000/2003 IBC Sections | 23 |
| 2.2 Quality Assurance Plans to Provide for “Designed-In” Wind Resistance | 24 |
| 2.3 Structural Observation | 25 |
| 2.4 The Quality Assurance Plan..... | 25 |
| 3. General Overview of Requirements: IBC, IRC, and ASCE 7..... | 27 |
| 3.1 Selected and Relevant 2003 IBC Sections | 27 |
| 3.2 Discussion of the IBC Provisions | 27 |
| 3.2.1 IBC Design Basis | 27 |
| 3.2.2 IBC Wind Design Methods in General | 28 |
| 3.2.3 General Details of Alternatives | 29 |
| 3.2.4 Other Supplementary Standards..... | 32 |
| 3.2.5 Design Criteria and Factors..... | 32 |
| 3.3 International Residential Code (IRC)..... | 33 |
| 3.4 Selected and Relevant ASCE 7-98 Sections (ASCE 7-02 Similar) | 33 |
| 3.5 Discussion of the ASCE 7 Design Criteria | 34 |
| 3.5.1 Details of the Methods and Options..... | 34 |
| 3.6 Flood Loading and Wind Actions | 38 |
| 3.7 Load Precision and Engineering Judgment..... | 38 |

| | | |
|-------|---|----|
| 4. | Basic Wind Speed..... | 39 |
| 4.1 | 2000/2003 IBC and ASCE 7 1998/2002 Sections..... | 39 |
| 4.1.1 | Selected Relevant IBC Sections | 39 |
| 4.1.2 | Selected and Relevant ASCE 7 Sections | 39 |
| 4.2 | Ways of Measuring Wind..... | 39 |
| 4.2.1 | Introduction | 39 |
| 4.2.2 | Three-Second-Gust Wind Speed | 40 |
| 4.2.3 | Selection of Wind Speed | 40 |
| 4.3 | The Wind Speed Map | 43 |
| 4.4 | Special Wind Regions | 45 |
| 5. | Importance Factors | 49 |
| 5.1 | Reprinted 2000/2003 IBC and 1998/2000 ASCE 7 Sections | 49 |
| 5.1.1 | Selected and Relevant IBC Sections..... | 49 |
| 5.1.2 | Selected and Relevant ASCE 7-98 and 7-02 Sections..... | 49 |
| 5.2 | Importance Factors and Occupancy Categories..... | 50 |
| 5.3 | Occupancy Categories | 50 |
| 5.4 | Details of these Categories | 52 |
| 5.4.1 | Essential Uses | 52 |
| 5.4.2 | Special Uses..... | 52 |
| 5.4.3 | Hazardous Uses | 53 |
| 5.4.4 | Miscellaneous Uses | 54 |
| 5.4.5 | Standard Uses | 55 |
| 5.5 | Difficulties with Mixed Uses, or Additions or Alterations..... | 55 |
| 5.6 | Quality Assurance..... | 56 |
| 6. | Exposure and Topographic Effects..... | 57 |
| 6.1 | Relevant IBC and ASCE 7 Sections | 57 |
| 6.1.1 | Selected and Relevant IBC Sections..... | 57 |
| 6.1.2 | Selected and Relevant ASCE 7-02 Section 6.5.6.1 | 57 |
| 6.2 | Exposure Effects..... | 58 |
| 6.2.1 | General Definitions..... | 58 |
| 6.2.2 | Discussion of Exposures..... | 58 |
| 6.2.3 | Practical Determination of Site Exposure..... | 60 |
| 6.3 | Velocity Gradient and the Power Law..... | 60 |
| 6.4 | Terrain Effects | 62 |
| 6.4.1 | General | 62 |
| 6.4.2 | Practical Tips for Determining H and L_h | 64 |
| 7. | Gust Response | 73 |
| 7.1 | Relevant ASCE 7-02 Sections | 73 |
| 7.2 | Background Discussion of Flexible and Rigid Structures | 73 |
| 7.3 | Conditions Affecting the Gust Effect Factor | 75 |
| 7.3.1 | Gust Effect Factor versus Wind Speed and Turbulence | 75 |
| 7.3.2 | Gust Effect versus Size of Structure | 75 |
| 7.3.3 | Gust Effect versus Damping of Structure | 75 |
| 7.4 | The “True” Gust Effect Factor | 76 |
| 7.5 | Gust Effect Factor in the ASCE 7 Standard | 78 |
| 7.6 | Further Considerations | 78 |
| 8. | Design of Wind Pressures on Main Wind-Force-Resisting Systems..... | 81 |
| 8.1 | Selected and Relevant 2000 IBC Sections (2003 IBC is Similar) | 81 |
| 8.2 | Selected Relevant 1998 ASCE 7 Sections (ASCE 7-02 is Similar) | 81 |
| 8.3 | General..... | 82 |
| 8.3.1 | Mean Roof Height | 82 |

| | | |
|--------|--|-----|
| 8.3.2 | Windward and Leeward Pressures | 85 |
| 8.3.3 | Internal Pressures | 85 |
| 8.4 | Complete Load Path..... | 86 |
| 8.5 | Directionality Factor | 87 |
| 8.6 | Load Combinations and Stress Increases | 87 |
| 8.6.1 | Load Combinations | 87 |
| 8.6.2 | Stress Increases | 88 |
| 8.7 | Overview of the Wind Design Methods..... | 89 |
| 8.7.1 | Comments on the Analytic Method | 89 |
| 8.7.2 | Comments on Simplified Methods..... | 94 |
| 8.7.3 | Comments on Torsional Wind Loads | 95 |
| 8.8 | Stability | 103 |
| 9. | Wind Pressures on Components and Cladding of Structures..... | 105 |
| 9.1 | 2000/2003 IBC and 1998/2002 ASCE 7 Provisions | 105 |
| 9.1.1 | Selected and Relevant IBC Sections | 105 |
| 9.1.2 | Selected and Relevant ASCE 7 Sections | 105 |
| 9.2 | Design of Components and Cladding | 106 |
| 9.2.1 | General | 106 |
| 9.2.2 | Areas of “Discontinuities” | 108 |
| 9.2.3 | Effective Wind Areas | 110 |
| 9.3 | Pressures on Structural Elements | 110 |
| 9.4 | Determining Code Pressure Values..... | 111 |
| 9.4.1 | 2003 IBC Methods (2000 IBC Similar) | 111 |
| 9.4.2 | ASCE Methods | 111 |
| 9.5 | Practical Design Tips | 111 |
| 9.6 | Internal Pressure Effects | 112 |
| 9.6.1 | Openings | 114 |
| 9.7 | Other IBC-Regulated Components and Cladding..... | 115 |
| 10. | Glass and Glazing | 117 |
| 10.1 | Relevant 2000 and 2003 IBC Sections..... | 117 |
| 10.2 | Introduction | 118 |
| 10.3 | General Requirements for Glass and Glazing | 118 |
| 10.3.1 | Summary | 118 |
| 10.3.2 | Deflection Limits, General | 120 |
| 10.4 | Specific Wind Design Provisions for Glass and Glazing..... | 120 |
| 10.5 | Other Glazing Materials | 121 |
| 10.6 | Provisions for Glazing in Hurricane-Prone Regions in Both the IBC and ASCE 7 | 121 |
| 10.7 | Practical Examples Demonstrating Glazing Wind Pressure Design or Analysis..... | 122 |
| 11. | Prescriptive Provisions in the IBC, IRC, and Other Referenced Standards | 125 |
| 11.1 | Selected Relevant IBC Sections..... | 125 |
| 11.2 | Selected Relevant IRC Sections..... | 126 |
| 11.3 | Code Basis for Conventional Construction..... | 128 |
| 11.3.1 | Introduction | 128 |
| 11.3.2 | 2000 IBC Provisions | 130 |
| 11.3.3 | IRC Provisions | 133 |
| 11.4 | Referenced Prescriptive Standards: Comparison and Contrast..... | 134 |
| 11.4.1 | WFCM and SBCCI SSTD-10 Prescriptive Methods | 134 |
| 11.5 | Comparisons of All Four Methods..... | 134 |
| 11.5.1 | General | 134 |
| 11.5.2 | Detailing Criteria..... | 135 |
| 11.6 | International Building Code (IBC) Prescriptive Methods..... | 137 |
| 11.6.1 | Overview of IBC Section 2308 Provisions | 137 |

| | | |
|---------|--|-----|
| 11.7 | General Pitfalls | 140 |
| 11.7.1 | Load Path..... | 140 |
| 11.7.2 | Topography Effect..... | 140 |
| 11.7.3 | Helpful Tip | 140 |
| 11.7.4 | Wind vs. Seismic in Light-Framed Building Design..... | 141 |
| 11.7.5 | Deflection Considerations | 143 |
| 11.7.6 | Narrow Shear Walls or Braced Panels..... | 143 |
| 11.7.7 | Gypsum Board Shear Wall and Braced Panels..... | 145 |
| 11.8 | Advice on Using the Four Methods..... | 146 |
| 11.8.1 | General Loading and Layout | 146 |
| 11.8.2 | Gable Bracing..... | 147 |
| 11.8.3 | Roof Uplift on Rafters | 147 |
